

Postdoctoral Research Associate in Experimental Particle Physics
University of Washington

The Experimental Particle Physics group at the University of Washington is seeking a Postdoctoral Research Associate to join its effort on the ATLAS experiment at CERN.

The group has worked on the design and construction of the ATLAS forward muon chambers and is now contributing to muon system installation and commissioning, on-line data quality assurance, data base and tracking. We are also working on the identification of b-quarks and tau-leptons. Our physics analysis effort is currently focused on the Exotics and Higgs groups.

The successful candidate is expected to play a leading role in the physics object reconstruction and identification and in data analysis with an emphasis on the Higgs searches. The position will be based at CERN.

Applicants should send their curriculum vitae and arrange to have at least three letters of recommendation sent to Professor Anna Goussiou at goussiou@phys.washington.edu. (Please send all documents in pdf format.)

The University of Washington is an Equal Opportunity/Affirmative Action Employer and strongly encourages applications from women and minority candidates.
