

The Experimental Particle Physics group at the University of Washington is seeking a Postdoctoral Research Associate to join its effort on the ATLAS experiment at CERN.

The group has made significant contributions to the design, construction and commissioning of the ATLAS forward muon chambers. We are now working on the identification of b-quarks and tau-leptons, and focusing our physics analysis efforts on the search for the Higgs and for new physics beyond the Standard Model. The successful candidate is expected to play a leading role in data analysis with an emphasis on the Higgs searches. The position will be based at CERN.

Applicants should send their curriculum vitae and arrange to have at least three letters of recommendation sent to Professor Anna Goussiou at goussiou@u.washington.edu.

The University of Washington is an affirmative action/equal opportunity employer.

This position will remain open until filled.
